

## Ladies Heated Bodywarmer USER INSTRUCTIONS

### WELCOME

Your high performance EXOGLO Pro-Series heated bodywarmer has been designed to provide you with warmth where and when you need it, whatever the weather.

The core-heating element, FabRoc™, is a revolutionary material invented for use in the aerospace industry and is extremely efficient in generating heat from a low voltage source. FabRoc™ panels are sewn into your EXOGLO vest to provide direct heat to your body in certain key areas, transferring warmth throughout your body.

StormRider FabRoc™ panels are pre-set to a maximum surface temperature of 122°F. It is not possible to overheat FabRoc™ as it automatically uses less power as it reaches its operating temperature, a unique property that ensures the material is safe in all environments.

### PRODUCT CONTENTS

- EXOGLO Ladies Pro-Series bodywarmer
- FabRoc™ panels sewn into the garment
- Portable Battery Pack (Optional Accessory)
- Battery charger & Remote Control (Optional Accessory)

## GETTING THE BEST RESULTS FROM YOUR EXOGLO

The closer the FabRoc™ panels are to your skin, the more heat you will feel. Create your own microclimate by wearing whatever garment underneath (a fine pullover, t-shirt or blouse) which creates the desired results. The three battery settings will allow you to dial in the exact desired/required temperature no matter the season or climate.

Switch your heated vest on the highest battery setting a few minutes before entering the cold environment. Depending on the ambient temperature and how physically active you are, you should then be able to turn the garment temperature down after approximately 15-20 minutes. Your body temperature and the garment's insulation will work in conjunction with the heating system to often keep you warm at lower battery settings.

If you reduce your activity, the temperature drops or you simply feel cold, increase the battery setting until you once again reach a comfortable temperature.

## USING THE POWER PACK

Fully charge your power pack before initial use. This will take approximately 3 hours.

1. Insert the power pack into inner left front pocket (with hook & loop closure)
2. Insert connector cable into the battery pack.
3. Switch the power pack on to the desired setting. You may also use your remote control fob to manage your power supply and settings.

## CHARGING THE POWER PACK

Remove power pack from garment connection and connect charger unit to the supplied power pack. Ensure that power pack is switched **off** during charging. The red light on the front of the charger will light up when the charger is checking on the charge level of the battery. Fully depleted power packs will take approximately 3 hours to fully recharge. The red light stays on continuously while the power pack is being re-charged. The red light turns to green when fully charged. The charger supplied has been chosen specifically for the power pack supplied.

**No other charger unit should be used with any EXO2 power pack. The use of any other charger unit is dangerous, may cause injury and will void the warranty.**

## SAFETY FEATURES

The FabRoc™ heating system has been designed for safe and reliable use. It has been tested to comply with governmental safety regulations and has been marked with the CE seal of approval. Safety devices are UL listed to ensure that each unit is rendered safe, even under faulty conditions. **DO NOT** replace or interfere with the electrical components in the heated bodywarmer, the battery or the charger unit. **DO NOT attempt to open the sealed battery unit.** Batteries should be discarded in accordance to local governmental regulations.

## CLEANING INSTRUCTIONS

- Machine Wash on LOW only (104°F for temperature set units)
- Use only non-biological soaps
- Cool Iron
- Do not tumble dry or dry clean

## WARRANTY

Every heated bodywarmer has a one-year warranty covering all electronic and mechanical failures. In the unlikely event that any part should fail within the first year, return it to us and we will repair or replace it free of charge. **Note: The warranty does not cover intentional alterations, accidental damage or improper cleaning.**

## TROUBLESHOOTING

### What happens if my heated bodywarmer is torn?

1. **DO NOT** attempt to replace or interfere with the electrical components in the bodywarmer.
2. Return the garment to EXO2 for repair.

### What happens if my heated bodywarmer does not get warm?

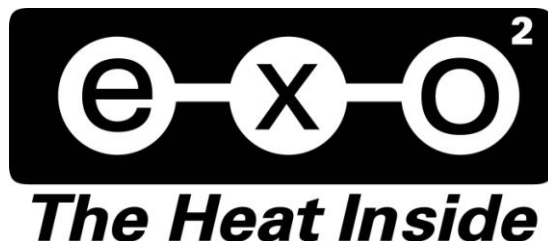

1. Check to ensure that your EXOGLO bodywarmer is properly connected to the battery pack or a 12 volt direct connect power source.
2. If it still will not heat, return the garment to EXO2 for repair.

**NEVER LEAVE BATTERIES THAT ARE CHARGING UNATTENDED!**

**DO NOT WEAR YOUR EXOGLO HEATED BODYWARMER WHILE CHARGING THE BATTERY!**

**KEEP BATTERIES AWAY FROM WATER!**
