

FOR IMMEDIATE RELEASE

Triumph Heated Vest Launches!

Another World Class brand selects exo² FabRoc(tm) heat technology. This stylish new co-branded vest has received an enthusiastic 'thumbs up' at the most recent Triumph Global Dealer Conference. Covered entirely with FabRoc(tm) heating panels, this new and technically innovative garment for motorcyclists will form the 'hot' part of an increasingly 'cool' Triumph clothing brand this Autumn.

exo² is Awarded the 'World's First' Patent for ThermoKnitt! We are proud to announce that Patent Number GB2417660 has been granted to exo² for its ThermoKnitt Heating Element, consisting of an innovative combination of our FabRoc(tm) heating material, conductive thread micro-conductors and a wool or other fibrous substrates. The elements are knitted together to form a seamless heating layer suitable for a wide range of applications. Watch this site for more novel developments throughout the year.
